

Mixpeek for Security Teams: Multimodal Threat Intelligence at Scale

Your Priorities

- **Protecting People & Assets:** detect and respond to emerging threats, from drones to insider risks.
- **Maximizing Existing Investments:** unlock more value from cameras, sensors, and monitoring systems by fusing fragmented feeds.
- **Ensuring Compliance & Trust:** maintain verifiable, auditable evidence trails for regulators and insurers.
- **Driving Efficiency & Speed:** reduce manual monitoring overhead and deliver real-time alerts.

How Mixpeek Helps You Succeed

- **Detect & Triage Faster:** unify video, RF, audio, and text signals into actionable alerts.
Example: A drone loitering near a restricted zone is automatically flagged with video clip + metadata for analyst review.
- **Fuse Multimodal Signals:** correlate across feeds (EO/IR cameras, RF sensors, audio logs) for one coherent picture.
Example: Anomalous RF signature + thermal camera track linked in seconds, not hours.

- **Deliver Verifiable Evidence:** create tamper-proof incident bundles with metadata, checksums, and annotations.

Example: A warehouse intrusion is exported as a signed package for law enforcement and insurers.

- **Increase Efficiency & Coverage:** modular enrichment lets you scale from one site to global infrastructure with minimal overhead.
Example: Edge devices flag low-confidence detections locally while HQ handles deep offline analysis.

Why Leading Security Teams Choose Mixpeek

- **Faster Response:** incidents triaged in minutes, not hours.
- **Greater Transparency:** every detection comes with metadata, audit trail, and explainability.
- **Cross-Sensor Consistency:** one schema for video, audio, RF, and text across all locations.
- **Higher ROI:** maximize your existing surveillance and monitoring investments.

Next Step

Run a 2-week proof of concept: integrate one facility's feeds, detect anomalous drone and perimeter activity, and validate ROI fast.
